

CUSTOMER SPOTLIGHT

A global supply chain and eCommerce organization achieves 30% cost reduction by moving to Azure

CHALLENGE

This global e-Commerce & supply chain organization was eager to improve their security and lower overall costs by moving from an on-prem solution to Azure. Their goals for their migration project included exiting their on-prem data center with minimal interruption, providing a functional basis for internal financial applications and educating their internal teams to manage infrastructure. Budget was a major concern— deployment was dependent on cost reduction, with no room for error.

SOLUTION

3Cloud built a robust cloud security platform on a strong foundation to enable a successful migration on a larger scale. The migration to Azure consisted of a comprehensive infrastructure build which included servers, storage, networking, BI, and more. The 3Cloud team also provided a 90-day Managed Service contract in tandem with education, giving the client the ability to maintain and deploy solutions in-house. The data center migration resulted in updated, lean and streamline systems that enabled significant cost efficiency for the client.

IMPACT

3Cloud completed the successful migration of 300 servers in less than 3 months. We also improved critical security infrastructure by building a robust cloud security platform. Most impactful was enabling the organization to achieve a 30% reduction in costs with updated, streamlined systems in Azure. In addition, we signed a managed services contract to support their team in tandem with education in order to deploy solutions in-house.

CLIENT PROFILE

- **Industry:** Supply Chain
- **Number of Employees:** 2,000
- **Annual Revenue:** \$569M
- **Innovation Focus:** Cloud Platform
