

# APP OPERATIONS

## Adoption, monitoring and support of your applications.

App operations ensures continuous improvement to shorten cycle times, improve quality, optimize resources, and amplify innovation of your apps. 3Cloud experts have supported a variety of application implementations and architectures and can ensure a stable, secure and optimized Azure environment.

### Rollout and Adoption

Improve app onboarding and adoption with proper rollout. 3Cloud leverages a rollout plan for new apps and trains app subject matter experts prior to launch. Working with your business stakeholders to ensure that the app is actually adopted and used, helping you realize the value for your investment.

---

### Managed App Dev

Post launch support for Azure custom applications. We assist in keeping your applications optimized by managing, maintaining, and enhancing the application for continuous improvement. This includes service management, service operations, release management, and incremental evolution and features addition.

---

### Managed DevOps

Leverage the depth and breadth of a dedicated Azure DevOps services team. We manage the deployment process to enable acceleration of your development processes while increasing reliability and quality. Configuration and Automation Management: Management of automated deployments, efficient operations for support, quality code releases, security analysis, and performance/load testing. Continuous Delivery Managed (CI/CD): Management of automated builds, management of deployments to designated environments, and automated gating to ensure controls for code promotion. Production Support Operations: 24x7x365 monitoring and managing incidents to minimize outages, provisioning, testing, change management, and incident management.
