# 3Cloud

CLOUD ROADMAP
An Action Plan to Reach the Cloud

The path to the cloud seems like an arduous journey. You need more than a plan; you need a sherpa. 3Cloud will help you develop both short-term and long-term strategies for your Azure initiatives and a clear strategy of how your business outcomes can improve and company processes will be affected with a Cloud Roadmap. A Cloud Roadmap analyzes your current Azure IT systems and services to create a deliberate growth plan that's aligned with your business goals. 3Cloud will be there to guide you, every step of the way.

All Roads Lead to the Cloud

- Improve quality & consistency with a Cloud Roadmap
- Build a customized, prioritized list of initiatives & projects to undertake
- Save time & money by communicating a prioritized *big picture* with a strategic roadmap
- Help stakeholders quickly understand complex data & dependencies
- Gain meaningful high-level insights by visualizing relationships
- Get a clear understanding of the estimated costs & duration for your planned migration
- Anticipate resourcing needs, plan assignments and choose the right solutions & vendors
- Get justifications & timelines for existing projects or initiatives
- Chart out the true cost, accountabilities, roles & responsibilities of all projects
- Ensure your future cloud infrastructure can support your business goals

Ensure Smarter Decisions With a Cloud Roadmap

A strong roadmap offers a clear view of your organization's core Azure objectives, aligning them with high-level business goals while identifying risks. This sets the stage for growth across all Azure IT systems and services, keeping mission-critical resources on track, reducing risk and accelerating business growth. By creating a well-structured blueprint, you ensure alignment between your IT team and organizational leadership on all aspects of your Azure environment.

Cloud Enablement & Adoption
Cloud adoption is unique to each organization, but the core stages of cloud enablement are consistent across industries. A defined strategy is key, along with a solid plan for governance and management of your digital assets. Best practices, detailed documentation and cloud adoption tools are critical for architects, IT professionals and decision-makers to create a successful, actionable plan.

Workload Rationalization
Workload rationalization is a vital part of any cloud adoption strategy, involving the evaluation of assets to determine the best approach to migration or modernization. The five key methods – rehost, refactor, rearchitect, rebuild and replace – are essential for digital transformation, supporting future workloads in the cloud.

Financial Operations (FinOps)
FinOps is a management practice that helps optimize cloud infrastructure costs by promoting shared responsibility across IT, DevOps and other teams. As cloud computing becomes a significant operating expense, FinOps enables organizations to control costs, increase profits and enhance decision-making. It ensures cloud spending aligns with business objectives, providing financial control, reducing friction and speeding up product development.
