

ENTERPRISE APPS

Modern Challenges Need Modern Applications

The average number of applications at each organization today is constantly growing. Organizations need to be confident their apps are secure, modern, and flexible, while maintaining cost efficiency. The ability to deliver differentiated and flexible customer experiences, improve teamwork and well-being, and adapt and scale to new business models and ways of working will determine your organization's success. 3Cloud's expert app developers ensure your apps are adaptable to work the way you do, built with a modern architecture that scales for your business needs and drives ease-of-use.

Build your next stage of growth with purpose-built app innovation on Azure.

- ✓ Break free of legacy design thinking with a confident go-forward plan that aligns to your business needs and Azure.
- ✓ Stay ahead of the curve with ongoing enhancements delivered directly to you without friction.
- ✓ Work smarter with unmatched analytics, integrated applications, and the power of Azure.
- ✓ Outcome-focused innovation with increased productivity and adoption.

70%

By 2025, 70% of new applications deployed at enterprises will use low-code or no-code tools.

- "The Digital Imperative for Every Organization", Microsoft 2022

App innovation starts here.

App Modernization

Modernize your applications and data to accelerate time-to-market, achieve greater agility, and scale with built-in security and high availability. Focus on building apps, not managing databases, by getting the most value from the cloud with the application and data modernization that best aligns with your business objectives. 3Cloud can help you speed up innovation across hybrid and multi-cloud environments with simplified management, faster application development, and consistent Azure services. Applications and technology play a critical role in an organization's ability to compete and execute.

.....

Cloud Native Apps

Break free of legacy thinking and take advantage of the power of cloud by harnessing the full potential of cloud native applications. Cloud native applications can empower your organization to make infrastructure development and management effortless. Achieving agility is what makes businesses competitive in an ever-evolving market. Cloud native apps offer innate benefits like cost efficiency, consumer friendliness, automation, ease of troubleshooting, real-time analytics, compliance, visibility, and enhanced security. With cloud native apps, organizations rapidly and dynamically maximize real-time innovation, becoming more resilient and delivering without disruption.

.....

Enterprise Integration

In today's enterprise infrastructure, system and application integration is more and more frequently a mission-critical concern. To be highly effective and qualitatively agile, your integration methodology must employ automation, while utilizing multiple styles of integration, with each being reusable, practical, and efficient. Enterprise integration is key to the enhancement of internal processes and business activities as well as the conceptualization, implementation, and distribution of critical applications. By sharing important information, simplifying processes, and maximizing opportunities, companies can improve their operational scalability and increase their reach and revenue. Empower your organization to seamlessly integrate, unify, and standardize core business capabilities across diverse IT environments.

About 3Cloud

Leading at the intersection of Azure and the digital imperative, 3Cloud helps companies migrate and modernize their infrastructure, data, and applications. With our unequaled expertise in Azure, we have implemented Microsoft's most advanced technology for hundreds of enterprise clients, enabling them to master resilience in the new digital world.
