

OpenAI Workshop

The power of OpenAI is here, let's explore what it can do.

This workshop is built to explore the hype versus reality of different models and services from OpenAI. OpenAI has built various models to bring intelligence and creativity to human interactions, and we are discussing the details of the natural language models (mainly focusing on DaVinci), exploring how ChatGPT and Playground can be accessed via OpenAI and Azure API, and discussing hyperparameters, basics of cost structures, and the different use cases available for Open AI on Azure. We are also looking into the basics of getting started with a model, various possibilities to apply it to business scenarios, and options available to enhance interactions. As well as how OpenAI is part of a process or value chain. Our goal is to dispel the hype and understand how OpenAI is a powerful new tool in our toolbelt to deliver actual value to our business stakeholders.

What you will learn in the OpenAI Workshop:

- ✔ **Unpacking OpenAI**
What it is and what it isn't, various models, what's hype, and what's available today.
- ✔ **Data Sources and Modeling**
Where does all the data come from, data training, sources, and futures.
- ✔ **Leveraging Your Data**
How can I leverage my data versus the data in the public domain?
- ✔ **Beyond Basic Interactions**
How to go beyond basic interactions with embedding, parameters, and prompts to tailor output for specific need.
- ✔ **Business Case for OpenAI**
Learn how you can use OpenAI in a solution today and the true business value.

Fun Fact: This summary was generated by OpenAI from the presenter notes, with minimal human review or oversight.

Workshop Agenda

- Introduction to OpenAI
- Hype vs Reality
- DaVinci / ChatGPT
- Exploring a Business Case
- Enhancing with Prompts
- Operationalizing & Next Steps

Workshops are one hour.
