

Build big with generative AI

Azure AI services can empower you to build and deploy your own AI solutions through large language models. Modernize your processes, accelerate development, and run responsibly anywhere with enterprise-grade security.

Responsibility

Filter and moderate content to ensure that coding and language of your AI models are used responsibly and for their intended purpose.

Scalability

Experience performance that stands out in today's market and over the horizon—pressure-tested AI across apps, data, and AI infrastructure solutions.

Ways to infuse generative AI into next-gen app experiences

Content generation

Automatically generate responses to customer queries. Generate personalized UI for your website.

Summarization

Summarize customer support conversations, financial reports, articles, social media trends.

Code generation

Convert natural language to SQL (or vice versa) for telemetry data, query proprietary data models.

Semantic search

Perform information discovery and knowledge-mining. Search reviews for a specific product or service.

Azure AI services

Azure AI Language

Azure AI Vision

Azure AI Speech

Azure AI Decision

Azure OpenAI

Azure AI Cognitive Search

Azure AI Form Recognizer

Azure AI Bot Service

Azure AI Video Analyzer

Azure AI Metrics Advisor

Azure AI Immersive Reader

Azure Machine Learning platform

Machine Learning

Consider this your experimentation platform for language models enabling:

- Prompt design, evaluation, and deployment.
- Choice in fine-tuning of either OpenAI or open-source software models.
- Powerful AI infrastructure with GPUs.
