Micrsoft's Top Azure Partner
Discover what makes us unique

Why Work With Us

Human-Led, Tech Driven
Transformation happens when human intelligence and technology work together. Backed by an entire connected community of problem solvers, we make amazing things happen faster and at a greater scale.

Radical Collaborators
At 3Cloud, everyone feels empowered to innovate, to take risks and experiment with new ideas that will change businesses and industries. Success takes on-demand collaboration with diverse leaders and thoughtful minds within our network of customers, Microsoft and 3Cloud.

Your One Accountable Azure Partner
Your go-to partner across Data & AI, App Innovation and Cloud Platform that's 100% dedicated to Azure.

We Meet You Where You Are
We meet you on your digital innovation journey. No matter where you are in your journey, our experts can advise, architect, build and optimize your Azure cloud environment to transform your business and get you where you want to go.

Microsoft Partnership

We've seen what's possible when extraordinary people and technology come together. Our strategic partnership with Microsoft enables us to deliver the best technical foundation with access to premium resources and more meaningful outcomes for clients.

Organizational Alignment: Ease of business and interaction with alignment to Microsoft across 3Cloud Sales, Tech Pre-Sales & Alliances.

Dedicated Program & Funding Team: Access to all major funding buckets to help our clients obtain Microsoft funding for qualified engagements.

What We Do

We are on a mission to unlock the ultimate Azure experience for enterprise organizations so they can reach their full potential. **Pairing technical depth with business clarity so they can:**

❯ Deliver Premier Client Experiences

❯ Reduce Risk & Optimize Operations

❯ Empower Employees to Thrive

❯ Build Unfettered Growth

❯ Create New Revenue Models

Leveraging the most comprehensive and trusted cloud platform, Microsoft Azure, we focus on three core categories of Data & AI, App Innovation and Cloud Platform

DATA & AI — APP INNOVATION — CLOUD PLATFORM — 3Cloud

Data & AI
Enable informed decision-making by leveraging data estates for intelligent insights

Data Platform

DATA ARCHITECTURE 3Cloud can help you with the services and infrastructure necessary to enable your data to be acquired, stored, modeled, enriched, queried and secured.

DATA ENGINEERING Your modern data platform investment is intended to allow you to develop and deliver custom datasets and solutions from any data to every consumer both inside and outside your organization.

DATA GOVERNANCE Effective governance can improve the quality, availability and security of your data to maximize the value it brings to your analytics, applications and monetization opportunities.

MANAGED DATA We remove the burden of managing data, reduce disruptions, enhance the data platform and empower your organization to focus on what matters – your business.

Analytics & BI

ENTERPRISE ANALYTICS Augmenting traditional reporting with predictive and prescriptive analytics provides additional insights by predicting future values and organizing your data.

DATA VISUALIZATION Our experts develop custom reports and dashboards that help develop and deploy customized visualization templates and themes enabling effective communication with data.

SELF-SERVICE & ENABLEMENT 3Cloud's broad capabilities can ensure that the benefits of an agile, self-service platform without risks to governance, performance and sprawl are achieved.

Artificial Intelligence

GENERATIVE AI Tap into Azure AI functionality with integrations best suited to your Azure ecosystem. Leverage AI modules that parody human vision, language, speech and decision-making.

MACHINE LEARNING 3Cloud can help empower your data scientists and developers to build, deploy and manage high-quality models faster and with confidence.

MLOPS 3Cloud can help you utilize MLOps for the creation of quality machine learning and AI solutions. Data scientists and machine learning engineers can collaborate and increase the pace of model development and production with proper monitoring, validation and governance of ML models.

App Innovation
Transform and modernize applications to scale, adapt and advance on Azure

App Modernization

ENTERPRISE INTEGRATION Share important information, simplify processes and maximize opportunities increasing reach and revenue.

EXPERIENCE DESIGN Create clear navigation, logical information architecture, and smooth interactions that reduce friction and make app usage effortless resulting in enhanced usability and the highest quality of user experience.

PAAS & SERVERLESS Platform as a Service (PaaS) is a complete development and deployment environment in the cloud enabling the utilization of Serverless Computing to build apps faster by eliminating the need to manage infrastructure.

Cloud Native App Dev

INTELLIGENT APPS Leverage artificial intelligence (AI) and machine learning technologies designed to improve efficiency, provide insights, enhance user experiences, and solve complex problems.

MICROSERVICES Break down apps into a collection of smaller apps that can be developed, deployed and scaled independently.

LOW-CODE Developers and non-developers alike can use a visual, user-friendly interface to design and build applications with ease.

DevOps & Automation

DEVSECOPS & SRE   Utilize Site Reliability Engineering (SRE), a software engineering approach to application development and deployment, change management, monitoring and emergency response.

PLATFORM AUTOMATION Enable the streamlining of automation tasks for Azure Landing Zone development, deployment, provisioning and operations using automation tools.

QUALITY ENGINEERING Incorporate future-proof quality throughout the app development lifecycle with Quality Engineering.

Cloud Platform
Ensure solid cloud infrastructure to optimize data platforms and apps

Cloud Strategy

CLOUD ENABLEMENT & ADOPTION A clear strategy needs to be defined, along with a strong plan on how to ready your organization for cloud adoption.

WORKLOAD RATIONALIZATION Assess assets to decide the best way to migrate or modernize each one in the cloud. Options include: rehost, refactor, rearchitect, rebuild and replace.

FINANCIAL JUSTIFICATION Assess and evaluate the financial aspects of adopting cloud computing services for your business or organization to determine whether migrating to the cloud is a cost-effective decision and how it can provide a return on your investment.

Managed Services

MANAGED PLATFORM Efficiently operate cloud workloads and navigate the complexities of scaled cloud operations, while managing your costs.

CLOUD SPEND MANAGEMENT Control and optimize spend on cloud computing services and licensing. We'll monitor, analyze and control cloud-related expenses.

MANAGED DATA We'll help reduce disruptions, enhance your data platform and empower your organization to focus on what matters, your business. 3Cloud's Managed Data team provides support of your data and analytics solutions and drives ongoing enhancements to the platform.

Infrastructure & Migration

APPLICATIONS, DATABASE & VMWARE MIGRATIONS Reap the benefits of cloud migration for your applications, databases and VMware with accelerated time to market, decreased development costs and enhanced performance.

ARCHITECTURE DESIGN & NETWORKING Choose the best architecture style and major technology components for your organization and tackle the specific design of your app.

IAM (IDENTITY & ACCESS MANAGEMENT) Safeguard your cloud ecosystem with multi-cloud identity and access management without disrupting productivity.

INFRASTRUCTURE AS CODE Infrastructure as Code (IaC) does away with time-consuming manual tasks, helping clients navigate Azure's complex ecosystems and purchasing options with cost optimizations.

SECURITY, GOVERNANCE & COMPLIANCE 3Cloud can help you set guardrails in your subscriptions with cloud governance helping control and optimize your cloud resources.

VIRTUAL DESKTOP Enable a secure remote desktop experience from virtually anywhere. We'll manage your end-to-end Azure Virtual Desktop to optimize performance, run multiple concurrent user sessions and reduce costs.

> "Now, our team is able to explore our business through a customer-focused lens. They are asking more in-depth questions which lead to a better understanding of our business and, ultimately, better business decisions."
