# Differentiate your GenAI experiences with Azure AI

3Cloud

High-performing GenAI is here

With AI adoption rates rising and enterprise expectations growing, what are you doing to ensure best in class experiences for your customers and employees?

3Cloud knows how to build exceptional GenAI experiences with Microsoft Azure AI that are grounded in your own data from Microsoft and 3rd party data sources and are capable of contextual interactions.

75%

of knowledge workers report they are using AI at work.

Discover how the retrieval systems of Azure AI Search in Azure AI Studio deliver unrivaled performance.

Reduce time & effort

Retrieval-augmented generation (RAG) is sophisticated but it doesn't have to be complicated. And, in Azure AI, differentiation is simplified through Azure AI Search.

Ground GenAI experiences to RAG with any data type, from any source with an out-of-the-box solution that includes built in re-ranking and indexing capabilities.

Chunking
Deliver rich context fast by first breaking down large datasets into more efficient, manageable pieces.

Vectorization
Improve response speed by processing entire chunks of data simultaneously instead of point by point.

Indexing
Provide accurate responses from large datasets by creating index categories for precise retrieval.

Ranking
Generate relevant responses through the re-ranking of search results based on deep meaning.

Bring your data to life at scale

Transform any workflow by infusing pretrained Azure AI Services into app conversations, insights, speech, translation, vision, and more.
